

Cable trays are not waterproof

Overview

Waterproofing is essential for protecting cable trays from moisture damage. For joints, corners, and areas where water tends to accumulate, apply waterproof sealants or gaskets. Mechanical Strength: XHHW-2 cables are less likely to be damaged by physical impacts or external pressure when installed in. Cable trays are support systems, creating a rigid route for cables and wires to travel from one point to another. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when. This issue of the CableGram presents questions and CTI answers to these questions that have been asked by interested persons and organizations concerning the application of cable tray systems. We believe you will find the answers useful. For outdoor use the trays must have extra protection, especially near saltwater bodies, to prevent corrosion and failure from exposure to the elements. Snake Tray customers can choose from hot dipped.
