

## Commonly Used Hardware Models and Specifications for Communication Optical Cables

### Overview

There are many types of cables used in data centers. Depending on what you are trying to accomplish, the type of data center build and what equipment you're deploying, you have many options available. A change of cable type may also be desired when executing moves, adds or changes in an existing data center, and as technology advances, new options to consider and integrate.

#### 2.2 Singlemode (SMF) vs. Multimode (MMF) Fiber Optic Cables

As bandwidth demand increases, a large number of data center managers may feel that singlemode cables are the definitive answer for the future. And to be fair, they do carry a lot more data over longer distances than multimode fiber cables. The real difference between the two is how they transmit light: singlemode fiber cables allow only one ray of light to be transmitted, while multimode fiber cables have several strands in a larger core that allow more "rays" of light to be transmitted simultaneously.

#### 2.3 Simplex vs. Duplex Fiber Optic Cables

A simplex cable is used when information or data only needs to flow in one direction.

#### 3.2 LC to LC Connections

The LC refers to a specific type of connector developed by Lucent Technologies and later standardized in EIA/TIA-604-10. The connector is now made by other manufacturers, although still referred to as a Lucent Connector, or sometimes a "small form factor connector." The purpose was to replace the SC connectors (more on that in a moment) with something smaller that offered a secure connection and as little insertion loss as possible. The LC is half the size of the SC, at 1.25 mm, and offers a...
