The invention discloses a vehicle-mounted network system based on optical fiber wavelength division multiplexing and a transmission method, wherein the vehicle-mounted network system comprises: a fiber optic communication channel through the vehicle; a wavelength division multiplexer disposed. We designed an in-vehicle communication system using wavelength division multiplexing and studied its characteristics in various environments. Since a single optical fiber can transmit multiple wavelengths of light, it is assumed that this will lead to a reduction in the number and weight of cables. Aspects of the subject disclosure may include, for example, collecting information about network nodes and network branches in a waveform-division multiplexing-passive optical network (WDM-PON), forming an embedding model based on the information about network nodes and network branches, receiving.
