

Ecuadorian Fire Protection Cable Tray Installation

Overview

Cable trays and busways at floor level or at slab penetrations shall have a waterstop no less than 50 mm in height. At slab penetrations, provide 20–30 mm of firestopping and install a fire-support plate at the top. Sealing shall be tight and reliable, without visible. Cable tray installation must comply with specific technical standards to ensure electrical safety, system reliability, and long-term maintainability. This document outlines the key requirements for cable tray layout, installation, and fireproofing in industrial and commercial environments. Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed. Looking for a reliable and easy-to-install fire-resistant cable tray solution?

The Fast Klick E90 system is the answer! This step-by-step guide shows you how to install wall-mounted cable trays using NKP-SNT wall brackets and ceiling-mounted using NKP-PL profiles, and threaded rod.
