

How much does a single-mode four-core optical fiber cost per meter

Overview

Single-mode fiber (OS2): This is the industry workhorse. In 2025, the base glass price has stabilized. The price swing usually depends on the fiber count (e., 12-core vs 96-core) and brand. Commercial building installations with 100-200 network drops generally range from \$15,000 to \$30,000. Single-mode fiber costs less per foot than multimode fiber, but it requires more. For instance, single-mode 4 core cables, which use OS2 fiber and support long-distance transmission up to 100 kilometers, generally cost more than multimode OM3 or OM4 variants designed for shorter runs within buildings or campuses. The main price drivers include cable grade, jacket material, pull tension, connectorization, and any required conduit or protection. The following coverage gives a practical price. The unit cost of fiber optic cables can vary from \$0. Custom-built cables or niche specifications can lead to higher prices.
