

## How to arrange the optical cables in the fiber optic terminal box

### Overview

Thus, a fiber termination box is used to terminate the optical fiber cables in the field and connect them to the pigtail by splicing. Then, the optical cable core and pigtail are. In this blog, we will discuss the two types of fiber optic cables and the role of a simple yet essential piece of equipment in the fiber laying procedure-the, the Fiber Termination Box, or FTB. It functions as a junction between the incoming fiber cable and the outgoing customer-side fiber cable, where one fiber can be spliced, patched. Before you drill holes, strip cables, or set up the splice tray, take 2 minutes to confirm the exact box type you're working with. Before. A Fiber Termination Box, also known as an optical termination box (OTB), is a compact, specialized enclosure designed for the organization, termination, splicing, and protection of fiber optic cables. It serves as a critical junction point within a network, providing a centralized and secure.
