

How to determine the cold splice on both sides of the fiber optic cable

Overview

With the splice protected, it's time to test the connection. Use a visual fault locator (VFL) for basic continuity checks or an OTDR for more detailed loss and reflectance measurements. Think of a fiber optic cable splice as the seamless stitching that keeps data flowing through the delicate threads of a network—like a master tailor joining fabric with precision. Whether repairing a broken cable or extending a fiber run, fiber optic splicing ensures light signals travel. Fiber optic splicing is the process of joining two optical fibers end-to-end. more The most detailed cold splicing prodcedures for broken. The steps of optical fiber cold splicing are as follows: ① First install the cold connector, buckle the snap rings on both sides, and snap down the middle slot; ② Strip the fiber, strip about 3CM long, and wipe it with alcohol; ③ Put in the cutting knife and cut about 1. 4CM; ④ Insert one end of the.
