

How to test the quality of cable trays

Overview

The bearing capacity is the most basic testing item for the quality of the cable tray. The load-bearing test is also called the SWL (safe working load) test, which is to test the bearing capacity of the cable tray according to the standards of the International Electrotechnical. Cable trays play a crucial role in ensuring the safety and efficiency of electrical and communication systems. With their responsibility to manage cables effectively, their inspection is essential to maintaining stable performance and meeting design standards. The. us-trations without notice.
