

Intelligent Customization Process for Cold Joints Used in Field Operations

Overview

This comprehensive guide from B. S Industries cuts through common site assumptions to provide expert-level technical analysis, proven preventative strategies, and advanced remedial techniques necessary for achieving a truly monolithic concrete pour in every critical vertical element. To resolve the issue of cold joints forming in concrete during the construction process, this study has developed a control system with visual prevention capabilities. Technically speaking, other factors can influence this time horizon, such as local temperature, type of cement used, concrete mix, etc. Furthermore, numerical models of push-off tests were developed. Question: When should saw cuts be made on a concrete slab?

The American Concrete Institute (ACI) is a leading authority and resource worldwide for the development and distribution of. Non-Destructive Evaluation of Cold Joints in Concrete can help identify the extent of these potential defects. Ultrasonic Pulse Velocity (UPV) Ultrasonic Pulse Velocity (UPV) is an effective non-destructive testing (NDT) method for quality control of concrete materials, and evaluating concrete.
