

## Method for Counting Items When Installing Distribution Boxes

### Overview

The Box Fill Calculator is an essential electrical installation tool that determines the maximum number of conductors, devices, and fittings that can be safely installed in electrical boxes according to National Electrical Code (NEC) standards. Plan devices by location with clear gang strategies and packing options built-in. Enter outlets, switches, low-voltage, fans, and junctions per space including spare allowance. Auto-pack calculates 4-, 3-, 2-gang mixes, minimizing wall clutter and box count. It takes the incoming power and safely distributes it to different circuits throughout your building. Click on any example to load it into the calculator. Typical single-gang switch box with 3-way switch installation. There are a number of reasons for this such as. b) Ability to trace wire cables.
