

Static IP Access to Layer 3 Switch

Overview

In this article, I'm going to walk you through setting up a network with three VLANs, each using different subnets, and configuring a Layer 3 switch to route between those subnets. Layer 3 interfaces forward packets to another device using static or dynamic routing protocols. You can configure a port as a Layer 2 interface or a Layer 3 interface. It is possible use L3 Routing with a UniFi Gateway or third-party gateway. Note: Traffic Identification and features that rely on it are not supported on networks managed by an L3. This article outlines a basic example of how layer 3 routing functionality on MS series switches could be implemented. Sign in with your Cisco SSO or create a free account to start. The steps of this manual have been executed in order to configure SSH. It performs switching by.
