

The distribution box is not against the wall

Overview

The distribution box shall be embedded in the wall. When building the wall, the reserved hole shall be about 20mm larger than the length and width of the distribution box. The reserved depth is the thickness of the distribution box plus the thickness of the plastering. Choosing between wall-mounted vs floor-mounted distribution boxes can have a big effect on the safety, economy, and bottom line of your project. This guide helps you compare both choices based on installation needs, space limitations, and long-term operating requirements so you can make smart. A conduit body is a removable-cover section of a conduit system that provides access at junctions or termination points. Article 314 applies to: These enclosures are used to contain splices, terminations, devices, and raceway connections.
