

The switch s optical port has AC power

Overview

The switch has a built-in AC power module and does not support pluggable power modules. Air flows in from the left side, and exhausts from the right side. Users can easily expand storage space using microSDHC or microSDXC cards up to 2TB (sold separately). An internet connection is required to perform this system. An AC adapter, often called a power adapter or charger, converts wall power to the specific voltage and current your electronic device needs to run or charge. A 10GE SFP+ Ethernet optical port supports auto-sensing to 1000 Mbit/s. You plug it into the dock thanks to the USB-C port, which not only powers the dock but can be put directly into the Switch or a pro controller to charge them. Why is the Power LED not lit?

The Power LED should be lit when the power system is working normally.
