

What are prefabricated cable tray supports called

Overview

Standard unistrut trapeze on all thread rod, data tray tapezes, prepunched conduit templates, and supports that can be fabricated long before they are needed are usually more efficiently welded. Cantilevered metal supports are some of the most common trapeze. Cablofil is the global gold standard for total cable management. Explore the one-stop shop for innovative, fast, and dependable cable management systems including wire mesh tray, ladder cable tray, prefab assemblies, fasteners, and assemblies. Don't spend the many hours required to do counts and create BOMs for projects, rely on Hubbell's take off. Cable tray systems are engineered support structures designed to route, support, and protect insulated electrical cables used for power distribution, control, instrumentation, and communication. There are several types of cable trays, including ladder, perforated, solid bottom, basket, and channel trays. Each cable tray type performs a different function and comes in various materials such as aluminum. This system supports and organizes all the required overhead services for a data center, including hot aisle containment, cable trays, conduit, bus ducts, fire suppression, duct work, and more. For years, architects and engineers have chosen Unistrut structural ceiling grids for data center. Beyond traditional AC power and twisted-pair telephone lines, there are coaxial and Cat 5/6 Ethernet cables, delicate fiber optic lines, and low voltage wires for security systems, audio, and building management system (BMS) occupancy sensors spreading out like a central nervous system to every.
