

What happens if there s no router for fiber optic cable

Overview

While fiber internet doesn't require a modem, you still need a router to distribute the connection across your network. Your router works hand-in-hand with the ONT, taking the internet signal and spreading it wirelessly or through Ethernet cables to all your connected devices. The answer is no; fiber internet doesn't need a traditional modem. A standard cable or DSL modem's job is to convert electrical signals into digital data that your devices can understand. This is a key distinction that often leads to confusion. Think of the ONT as a high-tech bridge between your ISP and your internal network – but engineered specifically for fiber's unique data. Fiber optic internet, also called Fiber to the Home (FTTH) or Fiber to the Premises (FTTP), has become the preferred choice for those seeking a faster, more reliable connection. According to Pew, fiber optic internet not only provides the fastest speeds with the lowest latency—it's often the fastest.
