

What is the secondary protection level of the distribution box

Overview

Voltage protection level: $\leq 2000V$. Level 2 protection mainly focuses on suppressing transient overvoltages and effectively absorbs the residual surge energy after Level 1 protection. 4kV to the distribution cabinet (primary distribution cabinet), then the outgoing line is led to the distribution box (secondary distribution box) in each building, and finally the outgoing line is led to the distribution cabinet. The terms primary, secondary, and tertiary distribution boxes are relative. From the transformer's low-voltage side (0.4kV), power is distributed to a main distribution panel. The secondary box adopts the design of inner and outer doors, the appearance is plastic sprayed, safe and beautiful, and the rainproof box top is suitable for field work. NEMA ratings are like weather forecasts for your electrical equipment – they tell you exactly what environmental conditions your enclosure can handle without turning into an expensive paperweight. Secondary distribution boxes, also known as sub-distribution boxes, generally serve specific power supply areas.
