

Where is the broadband fiber optic cable plugged in

Overview

The fiber optic cable does not plug directly into a standard home router because the signal type must be translated. The fiber line terminates at the Optical Network Terminal (ONT), which is typically supplied and installed by the internet service provider. This specialized equipment serves as the. Before diving into the setup, let's quickly recap why fiber optics are worth the effort: Lightning-fast speeds (up to 1 Gbps or higher). Low latency for seamless streaming, gaming, and video calls. Greater reliability compared to traditional copper cables. This guide demystifies the installation process, from the initial connection point outside your residence to the final setup inside, ensuring you understand every step of bringing. As part of the UK's digital switchover, we're replacing copper phone lines with cutting-edge Full Fibre Broadband, the UK's most reliable broadband technology. Imagine lightning-fast downloads, streaming and a connection you. Once the fiber cable gets to your house, the most probable way it will get in is through a small trench dug from the road right up to your compound through a process known as fiber-to-the-premises.
